Chapter 10: Prosecutor Interface

Accessing Prosecutor Interface Screen

This section explains how to access the screen through the Circuit Management Menu.

Overview, accessing instructions, and field definitions are included in this chapter.

ACCESSING PROSECUTOR INTERFACE SCREEN

<u>Overview</u>

The prosecutor interface provides an exchange of information with the local prosecuting attorneys's office using the PACC/PAAM computer system. The PACC/PAAM system sends bindovers, amended informations and paternity case information to the Circuit Court system. The Circuit Court system sends case numbers, judge assignments, bond information, scheduled court events and sentence information to the PACC/PAAM system.

Please call JIS if you are interested in implementing the PACC/PAAM prosecutor interface module. Special hardware and system software may need to be purchased for your AS/400 and PACC/PAAM system.

The procedures for using the prosecutor interface are explained during implementation training. If you have any questions, please call JIS.
